

## FLOORING

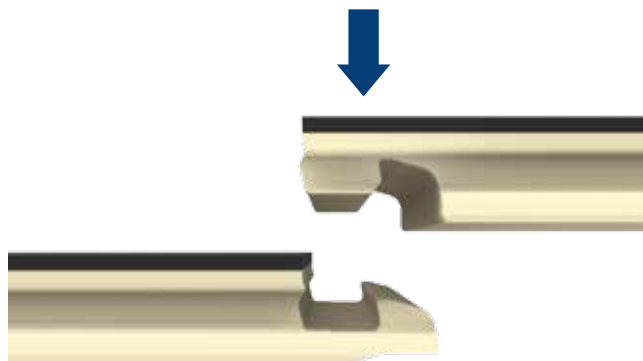

# UNIPUSH fold-down technology

UNIPUSH is one of the most intuitive to install and easiest to produce push down technologies ever invented. By angling the long side of the panel in, the panel can be connected on the short side simply by pushing the panel down on the short side. No additional materials (eg inserts) or equipment are necessary to produce UNIPUSH.

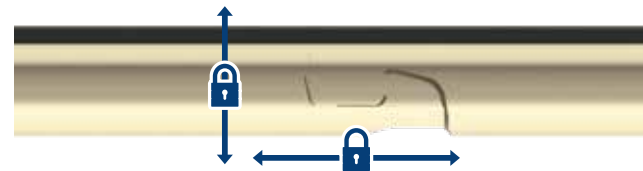

$$S_p = \pi r^2 \quad S$$
$$S_t = \pi r(r+m) \quad V$$

### PUSH DOWN WITH HORIZONTAL AND VERTICAL LOCKING

### FACTS:

- ▶ Intuitive and easy to install drop down connection
- ▶ Disassembly possible
- ▶ Horizontal and vertical locking along the entire width of the panel
- ▶ No additional material (eg inserts) necessary to create locking
- ▶ Easy integration in existing production lines. No additional equipment necessary

**UNIPUSH**  
PATENTED TECHNOLOGY

**UNILIN**  
DIVISION TECHNOLOGIES

$$k = \pi r m$$

$$V = \frac{1}{3} \pi r^2 h$$

#### BENEFITS FOR CONSUMERS / INSTALLERS

- ▶ Intuitive locking making the installation of flooring quick and easy
- ▶ Strong locking along the entire profile ensures stability over time
- ▶ Fold-down installation still possible even when planks are cut along their length

#### BENEFITS FOR PRODUCERS

- ▶ No need for additional equipment and material (eg insert machines and inserts)
- ▶ No impact on production efficiencies: lines can run at normal speed
- ▶ Flexibility in panel widths remains
